This resume outlines my background, achievements, and the projects I am most proud of!

Current Projects

I write about ongoing projects on my [blog](#).

📁 Work Experience

- **Mar26-Jun26: Junior Research Fellow** at Laboratory No. 42 «Intelligent Data Analysis», Institute of Control Sciences, RAS. Researched deterministic routing algorithms for tool calling in intelligent agent systems. Conducted experiments evaluating the robustness of neural AI detectors against translated texts.
- **2021-2025: Research Engineer** at the Central Aerohydrodynamic Institute (TsAGI). Conducted numerical and theoretical research on aerodynamic noise radiation mechanisms in hot flows.

🎓 Education

University Education:

- Bachelor of Science **MIPT, 2023**, *Applied Mathematics & Physics*, **GPA 4.7**
- Master of Science **MIPT, 2025**, *Applied Mathematics & Physics*, **GPA 4.9**

Additional Education:

- Deep Learning School (DLS):
 - CV (Spring 2025): [github](#)
 - NLP (Fall 2025): [github](#), [final project article](#)

🏆 Achievements

- Winner of **Kaggle** competitions (**one, two**).
- Winner of the MIPT **Hackathon**, *Tsifrium* case, team *Konspektum*, **2025**. The task was to create a **service** that generates notes for educational videos.
- Winner of the **I am a Professional** Olympiad in Mathematical Modeling, **2025**.

♥ Hobbies

- I play **basketball** and was the Team Manager & Captain.

The basketball section was my major source of energy at Phystech. I not only took a break from studies but also met a lot of talented people and felt like a team leader for the first time (growing personally as well, I believe).

Until 2023, we trained without a coach and just played. However, after a frustrating defeat in competitions, we wanted to play better, which 100% required a coach. As the captain, I had to solve this issue.

TL;DR: I found sponsors and a coach, we renovated the court, bought new equipment, held a cool open tournament in the fall where we recruited a new faculty team, and in the spring, we took 2nd place in the MIPT inter-faculty competitions.

- Took up **table tennis** after moving to Moscow (Autumn 2025).
- Taught various subjects to different audiences: school physics for an 8th-grade physics-math class (Spring 2021), a proprietary course on hydrodynamics for 3rd-year MIPT students (Autumn 2021), and Olympiad physics at MIPT (2023).
- Development of the project **BOTAY FALT, 2020-2021**.
This project was designed to aggregate study materials in one place. Phystech used to have an endless Google Drive where it was convenient to store everything. A VK group was created around this drive, publishing various collections of study materials and useful articles.
